

Travis Godwin Good, PhD

Travis Good is VP of Engineering for a bioscience company based in Vancouver, British Columbia where he guides a team using software, machine learning, and applied robotics to speed efforts to displace toxic pesticides with natural alternatives. His artistic work is mostly fictional and unpublished, shared among close friends and with the occasional writer's workshop. His largest project to date is an as-yet-unfinished novel entitled "Seven Days of Slate Rogers", a psychological thriller with noir stylings; he hopes to complete the final draft of this piece over the course of the next year. This marks Travis' first contribution to a published anthology.

Travis has no web presence to speak of but he can be reached at travis dot godwin dot good at gmail dot com.
